                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The striated muscle preferentially expressed protein (SPEG) can be linked to an enhancer/promoter derived from an aortic preferentially expressed gene to regulate smooth muscle cell-specific expression. This can be used as a method of inhibiting vascular smooth muscle cell proliferation. The nucleic acids are used to direct developmental stage-specific expression of a heterologous polypeptide which is stage-specific expression of a heterologous polypeptide which is especially selected from tissue plasminogen activator (LPA), p21 cell expression, nitric oxide synthetase, gamma-interferon, atrial cycle inhibitor, nitric oxide synthetase, gamma-interferon, atrial cycle inhibitor, nitric oxide synthetase, gamma-interferon strial cycle inhibitor. These are used to inhibit the proliferation of smooth muscle cells, e.g. for the treatment of atherosclerosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     06-FEB-1997;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    06-FEB-1998;

                                                                                                                                                                                                                                                                                                                                                                                                                                          The present sequence is a partial cDNA encoding human striated muscle preferentially expressed gene (SPEG) protein. This protein was detected in striated muscles of skeletal and cardiac tissues. Was detected in striated muscle cell protein isoforms encoded by It is one of the two muscle cell protein isoforms encoded by the aortic-preferentially-expressed gene-1 (APEG-1) located on human chromosome 2q33-34. The other protein isoform is specific to aortic smooth muscle cells designated APEG-1 protein. The present sequence can smooth muscle cells designated APEG-1 specific-promoter which may be be used to identify striated muscle cell specific-promoter which may be used to direct gene expression in striated muscle cells to treat diseases associated with these muscles. APEG-1 gene is useful for treating and diagnosing vascular diseases such as atherosciarosis and reconstructions.

Two variants of HiskP are produced by P. falciparum. One is associated with what is referred to as "knobby phenotype" (K30) and associated with what is referred to as "knobby phenotype" (K30) and associated with what is referred to as "knobby phenotype" (K30) and associated with what is characteristic of the vehicles of perfection. It has now been found that cDNA expressing arythrocyte infection. It has now been found that cDNA expressing cerythrocyte infection. It has now been found that cDNA expressing arythrocyte in the genomic clone (AAUL5512) is encoded in two expressing that the signal the continuing that synthesis of the protein occurs via the properties. Other, probes you have synthesis of the protein occurs via the properties. Other, probes synthesis of the protein occurs in a continuing that synthesis of the protein occurs via the properties. Other, probes synthesis of the protein sequences in a confine numerous tandem repeats with up to nine histidine residues in a cow, similar to other plasmodium proteins for which sequence data

CC designated Nov2. The protein is a membrane boun. Id secreted protein.

CC designated Nov2. The protein is a membrane boun. Id secreted protein.

CC nov polypeptides and polynucleotides are useful for treating or a preventing a Nov-associated disorder, and in the manufacture of a preventing a Nov-associated with a human disease such not consider the protein of the manufacture of a solv-associated disorder. They are also useful for treating disorders as Nov-associated those involved in development, differentiation as of constant on of the protein the pathologies related to and activation of the protein the pathologies of several human and activation of the protein the pathologies of several human accomplastas, in disease or pathologies of cells in blood circulation and constant of the pathologies of several disorders and/or pathologies, autoimmune and inflammatory diseases.

CC cardiovascular diseases, metabolic diseases, cancer growth and content of the pathologies of several activation activation activation of the pathologies.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                25-OCT-1999
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              AAX98114;
                                                                                                                                                                                                                                                                                                                                                            The present sequence represents a Pseudomonas aeruginosa nucleic aidd sequence. P. aeruginosa is an opportunistic human pathogen present in sequence. P. aeruginosa is an opportunistic human pathogen present in soil water and plants. The specification describes virulence polypeptides soil water and plants. The specification describes virulence polypeptides and nucleic acid sequence encoding such polypeptides. These sequences can be used to identify a compound which is capable of decreasing the expression of a pathogenic virulence factor. Compounds that inhibit the expression or activity of virulence factor polypeptides can be the expression or activity of virulence factor polypeptides can be used to treat pathogenic infections, especially where the infection is a parametric air activities.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             03-JUN-1999.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                AAX98035;
                                                                                                                                                                                                                                                                                                                                The present sequence represents a Pseudomonas aeruginosa nucleic aicd sequence. P. deruginosa is an opportunistic human pathogen present in sequence. P. deruginosa is an opportunistic human pathogen present in sequence of water and plants. The specification describes virulence polypeptides and nucleic acid sequence encoding such polypeptides. These sequences can be used to identify a compound which is capable of decreasing the expression of a pathogenic virulence factor. Compounds that inhibit the expression or activity of virulence factor polypeptides can be used to treat pathogenic infections, especially where the infection is a parameters insertion.

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ٠

pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

           Ö,
library constructed using Stratagene ZAP-cDNA syntesis kit. Oligo dr-primed, size fractionated ~1-6 kb, and directionally cloned at EcoRI and XhOI in Uni-ZAP XR. Following a single round of amplification pBlueScript SK phagemids were mass excised. A distribution channel for clones is being sought, but not currently available. Requests for clones cannot be honored.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This cDNA sequence comprises the 3' region of a cDNA clone for murine Down syndrome-cell adhesion molecule (DS-CAM), a member of a novel subclass of the Ig superfamily with homology to neural cell adhesion molecules. The middle region (see AAV31986) and 5' region (see AAV31985) of the clone are also provided. The murine DS-CAM clone was isolated from a C57 Black/6 mouse brain cDNA library using human DS-CAM cDNA (see AAV31981 and AAV31988) as probe. The invention also provides human DS-CAM proteins (see AAV42086-87), as well as expression vectors and host cells, the property of the property of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the c
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           transgenic animals, antisense oligonucleotides, and primers useful for amplification of DS-CAM nucleic acids. DS-CAM polypeptides are associated with developmental and neurological processes. They can be used in e.g. neural prosthetic devices used in entubulation methods of repairing (regenerating) damaged or severed peripheral nerves. The products can also be used in detection, diagnosis and therapy of developmental and neurological abnormalities such as Down syndrome, mental retardation, holoprosencephaly, agenesis of the corpus callosum, or schizencephaly. Antisense oligonucleotides are used for inhibiting translation of mRNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Claim 2; Page 81-83;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 2173

This cDNA clone codes for hown syndrome-cell adhesion molecule CC DS-CAMI (see AAW42086), a cell surface glycoprotein belonging to a CC novel subclass of the lq superfamily with highest homology to CC neural cell adhesion molecules. A modified direct coMA selection CC between ETS2 and MXI by using cDNA from trisomy 21 human foetal CC brain. A unique cDNA iradment, designated E51 (see AAV31982), was CC obtained and used to screen a trisomy 21 human foetal brain (14 wk CC gestation) cDNA limitary. Finither clones were obtained by exon CC trappling clones. A splice variant clone was deduced from connembrane bound DS-CAM2007), was also identified. The CC non-membrane bound DS-CAM2007), was also identified. The CC 19422-223. The invention also provides murine DS-CAM partial consequences (see AAV31985-87), expression vectors and host cells, consequences (see AAV31985-87), expression vectors and host cells, consequences (see AAV31985-87), expression vectors and host cells, consequences (see AAV31985-87), expression vectors and host cells, consequences (see AAV31985-87), expression vectors and host cells, consequences (see AAV31985-87), expression vectors and host cells, consequences (see AAV31985-87), expression vectors and host cells, consequences (see AAV31985-87), expression vectors and host cells, consequences (see AAV31985-87), expression vectors and host cells, consequences (see AAV31985-87), expression vectors and host cells, consequences (see AAV31985-87), expression vectors and host cells, consequences (see AAV31985-87), expression vectors and host cells, consequences (see AAV31985-87), expression vectors and host cells, consequences (see AAV31985-87), expression vectors and host cells, consequences (see AAV31985-87), expression vectors and host cells, consequences (see AAV31985-87), expression vectors and host cells, consequences (see AAV31985-87), expression vectors and host cells, consequences (see AAV31985-87), expression vectors and host cells, consequences (see AAV31985-87), expression vectors and host 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               signal transduction; trisomy 21; mental retardation; holoprosencephaly; corpus callosum agenesis; schizencephaly; diagnosis; assay; human; ds; ss.

E51 was used as a probe to screen the triangle.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     and MXI. E51 was used as a probe to screen the trisomy 21 foetal brain library. 62 Clones were isolated from the 2 million clones of the original library. overlapping clones were obtained that were used to deduce a full-length sequence (see AAV31981) coding for novel hown syndrome-coll adhesion molecule DS-CAM1 (see AAW42086). A splice variant, DS-CAM2 (see AAV31988), was also identified. DS-CAM polypeptides are associated with developmental and neurological processes. The polypeptides and nucleic acids are used to develop products for the detection, diagnosis and therapy of developmental and neurological and neurological seconds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 388 BP; 83 A; 119 C;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               and is deleted for the entire transmembrane domain. The DS-CAM gene spans 900 1200 kb of genomic DNA and maps at chromosome 21q22.2-22.3. The invention also provides murine DS-CAM partial sequences (see AAV31985-87), expression vectors and host cells, transgenic animals, antisense oligonucleotides, and primers useful for amplification of DS-CAM nucleic acid. DS-CAM polypeptides are associated with developmental and neurological processes. They can be used in e.g. neural prosthetic devices used in entubulation methods of repairing (regenerating) damaged or severed peripheral nerves. The products can also be used in detection, diagnosis and therapy of developmental and neurological abnormalities such as power syndrome. Mental relardation, holoprosencephalv, agenosis of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  neural cell adh-sion molecules. A modified direct cDMA selection technique was applied to bacterial and Plantificial chromosomes between ETS2 and MX1 by using cDNA from trisomy 21 human foetal brain. A unique cDNA fragment, designated E51 (see AAV31982), was obtained and used to screen a trisomy 21 human foetal brain (14-wk gestation) cDNA library. Further clones were obtained by exon trapping, and the complete DS-CAM2 cDNA sequence was identified trapping is a splice variant of membrane-bound DS-CAM1 (see AAW42086)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New isolated Down's Syndrome-cell adhesion molecule -develop products for detection, diagnosis and therapy developmental and neurological abnormalities
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             WPI; 1998-271791/24

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      AAI58190;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                AAI58196 standard; cDNA;
                                                              Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activiny, inhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and assays for receptor activity, arthritis and inflammation, leukaemias and
                                                                                                                                               The invention relates to human nucleic acids (AA157798-AA161369) and the encoded polypeptides (AAM8642-AAM82213) with nootcopic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    26-DEC-2000; 2000WU-US34263.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            WO200153312-A1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Homo sapiens

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           cDNA clones encoding each of the four CC subunits (alphal, alpha2, beta, gamma) are now available. Various combinations of such cDNAs may be incorporated into recombinant expression systems. This allows assessment of the contribution of the different subunits to the transport and regulation of calcium ions. Availability of the cDNA and its prod. Is useful in the design of therapeutic agents and diagnostic assays for diseases such as Lambert-Eaton Syndrome, involving autoimmune interactions with CCs.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human auxillary cytochrome
The nucleotide sequence of the cDNA coding region for the human auxillary cytochrome P450 species 2C6. The 90 to encodes a profit 1497 auxillary cytochrome P450 species 2C6. The 90 to encodes a profit 153-6. amino acids. The cDNA was amplified by PCR using the primers AQ87/63-6. The product was cloned into the yeast expression of the cytochrome P450 to produce the vectors P2D6 for the expression of the cytochrome P450 alone or p2D6R for co-expression with the yeast NADPH-P450 reductase. The vectors are used in a method for evaluating the safety of a chemical compound by reacting the chemical compound with recombinantly produced compound by reacting the chemical compound with recombinantly produced compound by reacting the chemical compound with recombinantly produced compound by reacting the chemical compound with recombinantly produced compound by reacting the chemical two protein or in cell extracts, and yeast NADPH-P450 reductase, either as a fused variants (AAQ87718-32), and yeast NADPH-P450 reductase, either as a fused variants (AAQ8718-32), and yeast NADPH-P450 reductase, either as a fused variants (AAQ8718-32), and yeast NADPH-P450 reductase, either as a fused variants (AAQ8718-32), and analysing the resulting metabolite to assess the safety of the chemical compound. The method is useful for
                                                                                                                                                                                                                                                        Evaluation expressing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              EP644267-A
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Homo sapiens
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        15-NOV-1995

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  0
```

The nucleotide sequence of the CDNA coding region for the human auxillary cytochrome P450 species 2D6 variant 1. The gene contains a change at base 886 from T to C as compared to the wild type sequence (AAQ87729). This changes the amino acid residue 296 from Cys to Arg. The CDNA was amplified by PCR using the primers AAQ87763-6. The product was cloned into the yeast expression vectors pAAH5N or pAHRR to produce the vectors p2D6 variant 1 for the expression of the cytochrome P450 alone

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       or p2D6R variant 1 for co-expression with the yeast NADPH-P450 reductase. The vectors are used in a method for evaluating the safety of a chemical compound by reacting the chemical compound with recombinantly produced human cycochrome P450 molecular species 12 (AAQ87714), 209 produced human cycochrome P450 molecular species 12 (AAQ87714), 209 and variants (AAQ87718-32), and yeast NADPH-P450 reductase, either as a and variants (AAQ87718-32), and yeast NADPH-P450 reductase, either as a and variants (AAQ87718-32), and yeast NADPH-P450 reductase, either as a set of the chemical compound. The method is useful for to assess the safety of the chemical compound, or its metabolite, will be determining whether the chemical compound, or its metabolite, will be converted into a carcinogenic or mutagenic form through metabolism in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence

```
The nucleotide sequence of the cDNA coding region for the human CC auxillary cytochrome P450 species 2D6 variant 2. The gene contains CC variations at bases 886: Th to C and 1457: C to G as compared to the wild CC type sequence (AAQ87729). These change the amino acid residues 296: Cys CC type sequence (AAQ87729). These change the amino acid residues the CC variation of the cytochrome parameters AAQ87763-6. The product was cloned into the yeast expression CC vectors paalisN or palkR to produce the vectors p2D6 variant 2 for the CC expression of the cytochrome p450 alone or p2D6R variant 2 for CC expression with the yeast NADPH-P450 reductase.

CC co-expression with the yeast NADPH-P450 reductase.

CC compound by reacting the chemical compound with recombinantly produced CC compound by reacting the chemical compound with recombinantly produced CC 2E1 (AAQ87716), or 3A4 (AAQ87717) or their auxillary species and CC variants (AAQ87718-32), and yeast NADPH-P450 reductase, either as a fused CC variants (AAQ87718-32), and yeast NADPH-P450 reductase, either as a fused CC converted into a carcinogenic or mutagenic form through metabolite to CC converted into a carcinogenic or mutagenic form through metabolism in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Evaluation of safety of a chemical cpd. - using recombinant yeast expressing human cytochrome p450 and a yeast NADPH-P450 reductase

```

```
The nucleotide sequence of the cDNA coding region for the human CC auxillary cytochrome P450 species 2D6 variant 3. The gene contains a CC change at base 1457 from C to G as compared to the wild type sequence CC (AAQ87729). This changes the amino acid residue 296 from Thr to Ser. The CC cDNA was amplified by PCR using the primers AAQ87763-6. The product was compared to the yeast expression vectors pAAH5N or pAHRR to produce the vectors p2D6 v. riant 3 for the expression of the cyto.hrome P450 alone or p2D6R variant 3 for co-expression with the yeast NADPH-P450 cor p2D6R variant 3 for co-expression with the yeast NADPH-P450 cor p2D6R variant 3 for co-expression with the yeast NADPH-P450 cor p2D6R variant 3 for co-expression with the yeast NADPH-P450 cor p2D6R variant 3 for co-expression with the yeast NADPH-P450 cor p2D6R variant 3 for co-expression with the yeast NADPH-P450 compound with recombinantly core converted human cytochrome P450 molecular species 12 (AAQ87714), 2C9 coround the passion of the chemical compound with recombinantly coround variants (AAQ87718-32), and yeast NADPH-P450 reductase, either as a coround variants (AAQ87718-32), and yeast NADPH-P450 reductase, either as a coround variant of the chemical compound. The method is useful for the determining whether the chemical compound, or its metaboli will be converted into a carcinogenic or mutagenic form through metabolism in the
                                                                                                                                                      Ŷ
